Forecast For Northeast England
Issued by Met Office Exeter
at 0400 on Sunday 14 Feb 2021

++ Valid for broadcast between 0600 and 1800

Headline:
Risk of ice as snow turns to rain. Becoming milder.

Today:
Cloudy and cold, with a strong and raw-feeling wind. Hazardous icy stretches are possible as early snow and perhaps freezing rain very gradually turn to rain through the day, as milder air makes erratic inroads from the west. Maximum temperature 5 deg C (41 deg F).

Tonight:
Rain should clear eastwards. with winds also beginning to ease in a drier, but cloudy and murky end to the night. Milder for most, although remaining cold near surviving snow. Minimum temperature -1 deg C (30 deg F).

Monday:
Murky in places initially, with low cloud, mist and fog slowly clearing to sunny spells in a brighter, milder day than of late. Perhaps turning cloudier later, with patchy rain. Maximum temperature 10 deg C (50 deg F).

Outlook for Tuesday to Thursday:
Remaining mostly mild, but changeable and often rather windy. Spells of rain are possible on all days, perhaps especially Thursday, but also some drier interludes and sunny spells.
